Comment:

The solution proposed by Administrator Pruitt is a welcome step in the right direction after many years of inactivity and inattention to this important matter.

The correct solution for this problem should include nothing less than the following:

1. Complete removal and remediation of all radioactive materials existing in the West Lake Landfill and adjoining properties including Coldwater Creek.
2. Property buyout for all property owners near the landfill or sites included in item 1.
3. Compensation to the families who have suffered themselves or have had loved ones die from rare cancers that are indicative of radiation exposure.
4. Establish a fund for the treatment of those who can attest to be exposed to or living near the West Lake Landfill or Coldwater Creek.

The Federal Government has caused serious injury to the St. Louis region by allowing the mismanagement of these hazardous materials and failing to protect the citizens of this region.
